Education

Carnegie Mellon University — Pittsburgh, PA
Bachelor of Science in Computer Science | GPA 3.9/4.0 — *May 2028 (Expected)*

Experience

Abundant (YC F24) — San Francisco, CA
Software Engineer Intern — *June 2026 – Present*

- Building Oddish, an AI-agent evaluation platform for benchmarking LLM models; designed reproducible task pipelines that feed reinforcement learning at scale for customers including OpenAI, Meta, and Cursor.
- Completed a data migration off an old task observability platform and removed deprecated API endpoints to unblock delivery to Anthropic and reduce run costs by ∼40%.
- Designed multi-service MCP and command-line tooling in Harbor task format to evaluate agents across complex tool usage, build/configuration, test creation, and live monitoring on DevOps tasks, delivered in samples to Cursor and OpenAI.

Wayhome — Pittsburgh, PA (Remote)
Software Engineer Intern — *January 2026 – May 2026*

- Assisted in developing an AI-driven property listing system for midterm rentals (Ruby on Rails, PostgreSQL), integrating automated listing generation and image analysis to reduce manual user effort by ∼60%.
- Introduced a testing endpoint adopted by a 12-developer team, enabling rapid testing of multistep processes and reducing costs of testing in-development AI features by 80%.
- Built a waitlist and email-distribution pipeline (Sidekiq-Cron) with scheduled background jobs, request rate limiting, and controlled feature release to 100+ users via ProductHunt.

ScottyLabs — Pittsburgh, PA
Software Developer, Technical Lead — *January 2026 – May 2026*

- Cut page-load times 6x and hosting costs 16% by completing a 3-year-delayed migration (Google Cloud → Vercel) and optimizing data loading via pagination, parallelized API calls, and query filtering.
- Led a 10+ engineer/designer team maintaining the official Carnegie Mellon Lost & Found platform (Next.js, TypeScript, tRPC, Prisma, PostgreSQL, Clerk) serving 16K+ students and processing 100+ queries/week.
- Hardened the submission and moderation workflow with Clerk role guards and Zod schemas, reducing invalid submissions ∼20%, and shipped a Mailgun pipeline for subscription notifications.

Carnegie Mellon University — Pittsburgh, PA
Undergraduate Research Assistant — *October 2025 – May 2026*

- Executed and analyzed experiments evaluating reasoning, planning, and tool-use behaviors of 12 LLM agents across multi-step tasks using the OpenHands agent framework.
- Built Python evaluation pipelines to benchmark AI-agent robustness, failure modes, and task performance, supporting experiments prepared for a NeurIPS submission.

Projects

Page-By-Page *(React, Tailwind CSS, Flask, PostgreSQL)*

- Developed a full-stack research discovery platform that ingests academic papers via the arXiv API and generates LLM-based summaries with personalized recommendations.
- Built backend pipelines for content processing and ranking, improving accessibility of technical research and reducing manual reading time by ∼40%.

Binder *(Ruby on Rails, SQLite, Stimulus, Docker, GitHub Actions)*

- Maintained an operations app used for Carnegie Mellon's annual Spring Carnival by 70+ coordinators.
- Built interactive admin-style tables with Tabulator and Stimulus, including live client-side countdowns and safe cleanup on navigation to facilitate smooth operation during peak event hours.

TypoCommand *(Java, AWT/Swing)*

- Engineered a real-time arcade typing game with a custom game loop, double-buffered rendering, event-driven input handling, and frame-level collision detection across 200+ concurrent entities.
- Improved tester typing speed ∼15 WPM and was adopted into the curriculum.

Honors & Awards

- **Lockheed Martin CodeQuest 2025** — 1st Place
- **Lake Sumter Mathlympics 2025** — 1st Place ($2,000)
- **Gray Swan Jailbreaking Hackathon** — 3rd Place ($400)
- **National Merit Scholar Finalist** (top ∼0.5%)
- **UCF HS Programming Tournament** — Top 10 / 90+

Skills

Languages: C++, C, Python, Java, SQL (PostgreSQL, SQLite), TypeScript, JavaScript, Ruby, HTML/CSS
Technologies: Git, Docker, PostgreSQL, MongoDB, PyTorch, TensorFlow, React, Next.js, Flask, Ruby on Rails, Express.js
